 Rev A: Two steps added into extension. 13/06/22

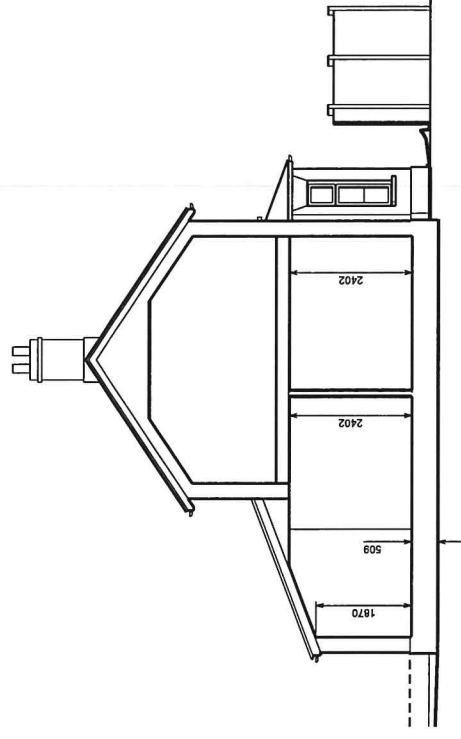

LONG SECTION

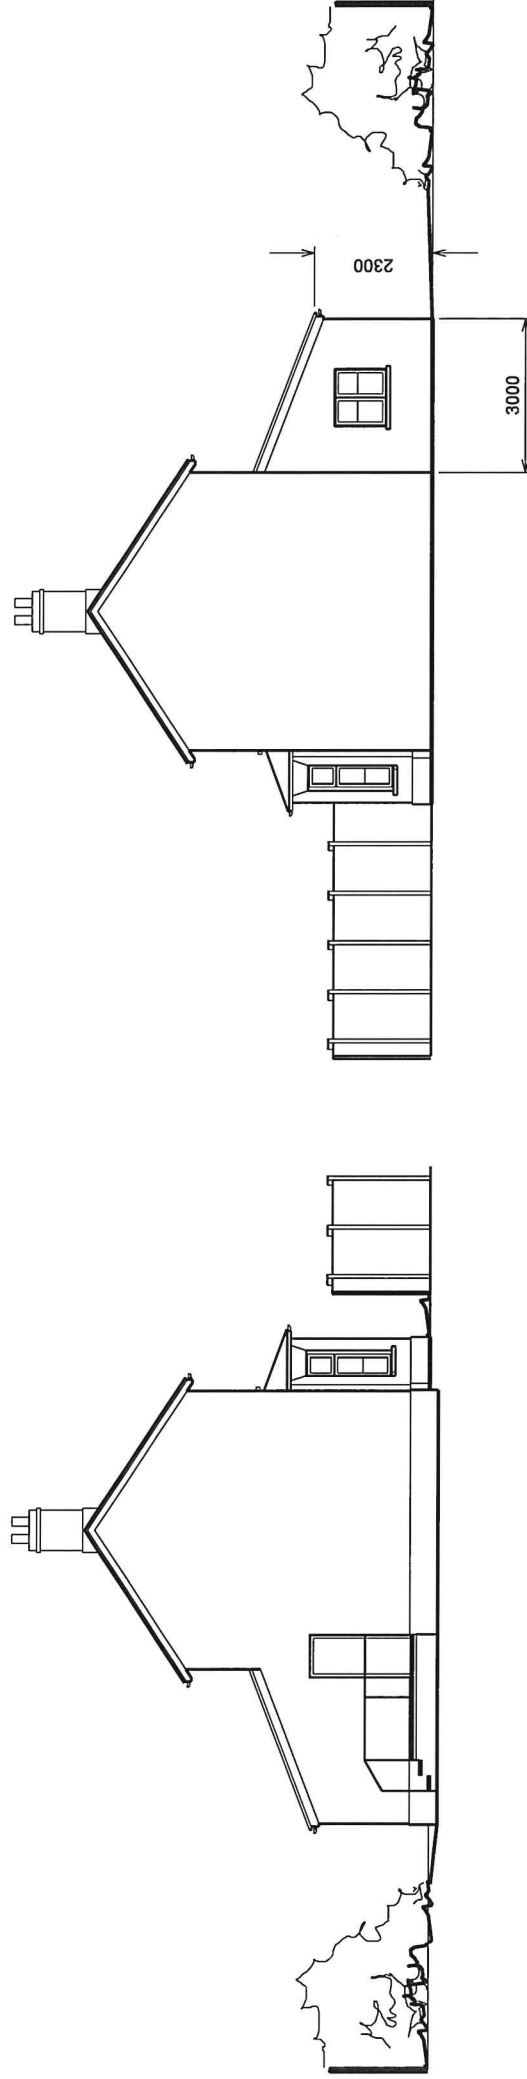

The ground level of the proposed extension is to be set above the existing ground floor level of the house.
 The floor to ceiling height of the existing house is 2.7m and the floor to ceiling of the extension at ground floor will be a minimum of 2.4m.
 The detail of foundation design will be considered at a later stage.
 The extension will be constructed with a solid brick and a gabled roof incorporating a ground beam.
 It is likely that the former will be the least invasive and able to accommodate tree root location.
